

Unicoil Receives Laboratory Accreditation from Dubai

By **Serife Durmus**

Saudi Arabia's Unicoil has received laboratory accreditation conforming to ISO17025-2005 from the Dubai Accreditation Centre (DAC), a signatory of the International Laboratories Accreditation Co-operation – Mutual Recognition Agreement (ILAC - MRA), Unicoil said on Saturday April 30.

The flat steel re-roller and coater is the first Middle Eastern company to receive such an accreditation in the flat steel industry.

ISO17025 is the most important standard for calibration and testing laboratories around the world. The process of accreditation includes proficiency testing programmes and inter-laboratory test programmes.

Unicoil produces 400,000 tpy of pickled and oiled coil, 340,000 tpy of cold rolled coil, 250,000 tpy of hot dipped galvanized coil, 210,000 tpy of PPGL, and 18 million linear metres per year of pre-painted corrugated coil at its plants in Jubail and Jeddah.

The company recently started production of chromium-free pre-painted galvanized sheet.
